DOES IT MATTER WHICH BIKE FRAME SIZE I CHOOSE?

Indeed, it does. A correctly fitting bike will help you to go further for longer. Choosing the right sized bike depends on the type

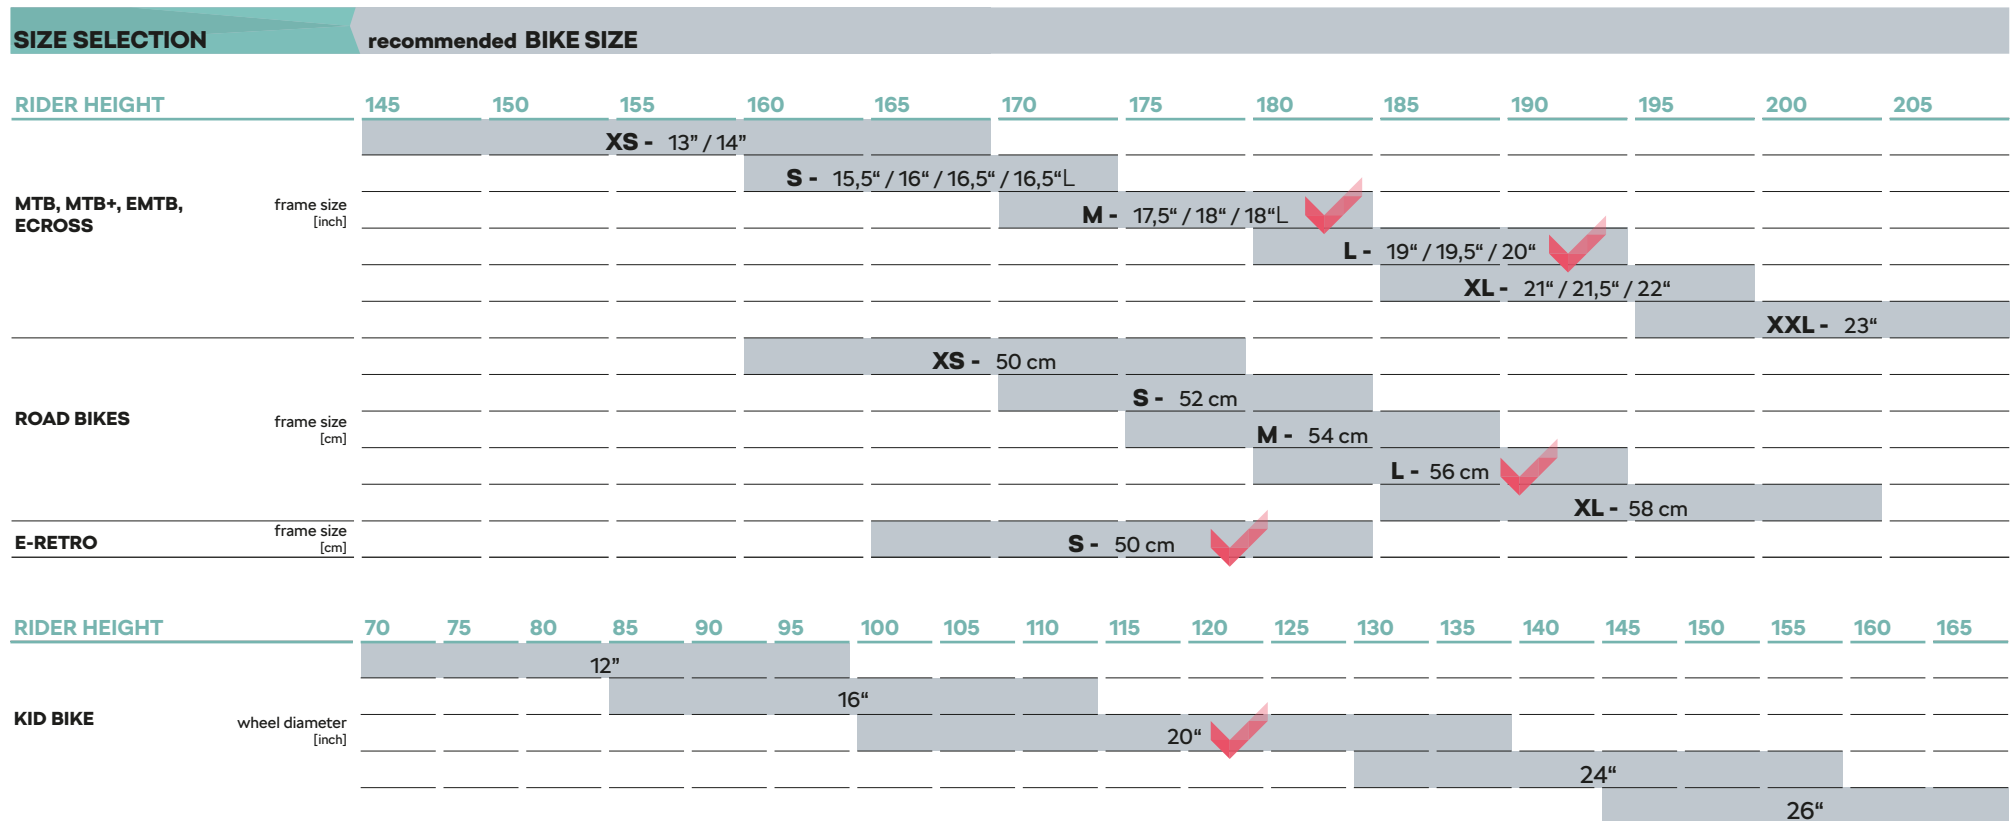

of the bike, your height, the inside leg measurement and your riding style. But it is not complicated as it sounds.

HOW TO CHOOSE CORRECT SIZE OF THE BICYCLE

The most important criteria that determines the size of the bike you need is your height. If you find that you're between sizes or you're unsure of which of two frame sizes would suit you best then other factors that can be considered is your reach.

The reach will affect your riding position quite significantly. You should not feel sitting too straight with your arms bend too much, neither leaning forward trying to grasp the handlebar.

If your sitting height is bigger than average, then the larger of the two frame sizes is recommended and vice versa.

 = These bike sizes are currently available

Some components will be replaced by the supplier (the front forks, brake discs, brake levers, seats) depending on availability.

Some images as well as the supplied bike parts may differ from the described specification.

All ŠKODA bikes will be available in 08/2021.
